

Nischay Rawat

Senior Software Engineer — Backend & Microservices (Node.js | NestJS | Cloud)

Delhi, India | [+91 7303313575](tel:+917303313575) | nischayrawat100@gmail.com | linkedin.com/in/nischayrawat | github.com/Nischay-Rawat

PROFESSIONAL SUMMARY

Backend Software Engineer with 4+ years of experience designing and building scalable microservices, REST APIs, and event-driven systems using Node.js, NestJS, TypeScript, and PostgreSQL. Proven track record delivering production systems serving 25,000+ customers, including payment processing, real-time matchmaking, and geospatial services. Skilled in Docker, AWS, Apache Kafka, gRPC, and Redis, with a strong focus on system scalability, API-level security for PII data, and performance optimization (up to 80% API response-time improvement).

CORE SKILLS

Languages & Frameworks: JavaScript, TypeScript, Node.js, NestJS, SailsJS, Express.js, Fastify, React

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, TypeORM

Messaging & Real-Time: Apache Kafka, RabbitMQ, gRPC, BullMQ, WebSockets

Cloud & DevOps: AWS (EC2, S3, Route53, Secrets Manager), Docker, CI/CD

Architecture & Security: Microservices, REST API Design, Event-Driven Architecture, API-Level Encryption/Decryption, PII Data Protection

Payments & Integrations: Razorpay, Worldline, Salesforce, Mavenlink, Cloudinary, Multer

Other: Data Structures & Algorithms, Git, Agile/Scrum

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Appinventiv

Dec 2025 – Present

Noida, Uttar Pradesh, India (Hybrid)

- Lead backend engineer for Kapston, an on-demand home services marketplace that has launched and now serves 25,000+ customers; designed and built 9 microservices covering Auth, User, Discovery, Geo, Booking, Payment, Inventory, Notification, and Admin.
- Developed a high-performance matchmaking engine averaging ~200ms response time for real-time customer-partner assignment.
- Implemented geospatial zone-based partner discovery, slot availability validation, and concurrency-safe locking to prevent double bookings, achieving 100% successful partner allocation for paid bookings under high traffic.
- Built the Payment Service integrating Razorpay and Worldline, supporting payments, refunds, payouts, invoices, wallet credits, webhook verification, and automated reconciliation jobs.
- Implemented API-level encryption/decryption for PII fields and maintained well-structured, well-maintained PII data tables to keep sensitive customer data secure and query-efficient.
- Implemented gRPC for synchronous service communication and Apache Kafka for event-driven workflows across services.
- Configured PostgreSQL primary-replica replication with TypeORM to improve read scalability, and integrated Redis caching with Bull queues for background job processing.
- Managed secure credentials with AWS Secrets Manager and file storage with AWS S3.

Backend Developer — Magna Technology Group

Apr 2023 – Jun 2024

United States (Remote)

- Improved API response times by 70-80% by separating priority and non-priority task processing using BullMQ and Redis.
- Built APIs for a performance dashboard tracking billable vs. scheduled hours per user.
- Integrated Salesforce and Mavenlink data into the internal project management tool, enhancing project tracking and management capabilities.
- Developed a real-time chat service using WebSockets and Redis.
- Implemented image/video upload functionality using Multer and Cloudinary.
- Designed and optimized PostgreSQL database architecture, achieving a 30-50% performance boost through indexing and data modeling.

- Containerized applications with Docker for streamlined CI/CD.

Associate Software Engineer (Full Stack Developer) — Cliffex

Dec 2021 – Apr 2023

India (On-site)

- Built core platform features for GetCreator (now IndieFolio), a creative talent marketplace connecting businesses with designers, illustrators, and video/animation professionals.
- Built a matchmaking engine to allocate creators to clients based on project criteria such as skillset, category, and availability.
- Designed the proposal workflow enabling creators to submit proposals and clients to review, approve, or request revisions.
- Revamped the design flow and restructured the payment process, improving usability and transaction efficiency.
- Developed reimbursement logic to automate creator payment settlements.
- Implemented a RabbitMQ-based queue for real-time notifications, payment events, and SMS alerts.
- Built and maintained full-stack features using the MERN stack, managing operations across multiple databases (MongoDB, MySQL).

EDUCATION

Bachelor of Computer Applications (BCA), Computer Science

Aug 2018 – Aug 2021

CCS (Chaudhary Charan Singh) University

CERTIFICATIONS

- Salesforce Certified Administrator (SCA) — Salesforce (Issued Dec 2023)
- Salesforce Certified Marketing Cloud Consultant — Salesforce (Issued Oct 2023)
- AWS, Docker, MERN Stack, Database Design, Problem Solving, Java, and MySQL certifications (11 additional certifications)

ADDITIONAL

- Solved 450+ Data Structures & Algorithms problems on LeetCode and PepCoding.
- Participated in the JPMorgan Chase Software Engineering Virtual Experience Program (Forage).
